

## Summary of Template Design Group Session 1 Recommendations

### Work Group Goals:

Work Group Goal	Design Group Recommendation
Make recommendations for template variations for different employer types, for example, small v. large employers, high turnover v. low turnover, HRA-HDHP/HSA-HDHP	Include variations for national v. Connecticut employers

### V-BID Plan Design Guiding Principles:

Guiding Principle	Design Group Recommendation
V-BID options allow for mental health parity	Modify “allowed” wording - mental health parity is required
V-BID plan is implemented as part of a consumer-centric approach	Elaborate on this principle to include the consumer group’s recommendations for a consumer-centric approach
<p>V-BID plan designs are transparent in how high value providers are defined and identified. High value in this case is defined by both cost and quality measures.</p> <ul style="list-style-type: none"> <li>○ The Consortium recognizes the importance of cost, for example, the price of services for specific providers, in defining high value, without overestimating the role of cost in defining value.</li> <li>○ The Consortium recognizes the importance of quality metrics in defining high value. The quality measures used should be transparent.</li> </ul>	<ul style="list-style-type: none"> <li>○ Modify language so that cost is not only a consideration of price of services, but reflects a more holistic exploration of cost.</li> <li>○ Definition of high value should also take into consideration accessibility of provider, patient-centeredness, and communication.</li> </ul>
Additional principles	Add principle about considering the perspective of employers in terms of cost savings, ROI, and regulatory barriers

### V-BID Template:

V-BID Option	Design Group Recommendation
Infographic	<ul style="list-style-type: none"> <li>○ Change wording in examples from “copays” to “cost sharing”</li> </ul>

	<ul style="list-style-type: none"> <li>○ Outcomes based incentive structure requires plan to offer alternative way to receive benefit for those who cannot meet outcomes</li> </ul>
Change incentives for specific services for all members targeted by age and gender	<ul style="list-style-type: none"> <li>○ Modify language to reflect that services should only be offered to those members for which they are evidence-based</li> <li>○ Align consumer incentives with increasing health plans' ability to attribute patients to PCP based on frequency of visits</li> <li>○ Include ACA services in recommended services but indicate these are already covered</li> </ul>
Discourage use of low value services through consumer disincentives	<ul style="list-style-type: none"> <li>○ Do not recommend this option as part of minimum recommended plan. May be an additional option for employers to implement with correct guidance and communication to employees</li> <li>○ Considers that this risks complicating communication materials for employees</li> <li>○ Remove ED visits as low value service</li> <li>○ Explore other examples of more basic low value services</li> </ul>
Change incentives for specific services by <i>clinical condition</i>	<ul style="list-style-type: none"> <li>○ Add substance use disorders and services (screenings, treatment, follow up) to list of conditions</li> <li>○ Add pre-conditions such as pre-diabetes and hypertension to list of conditions. These may be difficult to identify via claims but there are ways around this. Recommend integration of electronic medical records in future</li> <li>○ Remove the example of hydralazine as a preferred drug for coronary artery disease</li> </ul>
Change incentives for specific services for participation in disease management program	<ul style="list-style-type: none"> <li>○ Consider role of provider networks in managing chronic diseases and how they coordinate with health plan activities</li> </ul>
Change incentives for <i>visits to high value providers</i>	<ul style="list-style-type: none"> <li>○ Consider removing word "high" and just referring to "value" providers</li> <li>○ Include patient accessibility, patient-centeredness, and patient engagement as other dimensions to be considered in the definition of high value providers</li> <li>○ If including tiered network products, emphasize importance of transparency in assigning providers to different tiers</li> </ul>
Change incentives for specific services only if member visits high value provider	<ul style="list-style-type: none"> <li>○ Consider accessibility issues with Blue Groove example. Chronic care management from a specific provider that requires multiple visits may be challenging for patients</li> </ul>

Enrollment structure: Should enrollment in plan be voluntary or compulsory?	<ul style="list-style-type: none"> <li>○ Explain to employers the pros and cons for each option</li> </ul>
---	--

Other Recommendations:

- Templates must take into account regulatory barriers, especially for the small employer/fully-insured market. As part of SIM, the Consortium may recommend changes to certain regulations to allow for V-BID implementation.
- Templates should present examples of employers who have implemented plans by employer types, e.g. large self-insured employers, national employers, small fully-insured employers, and employers with HSA-eligible HDHPs.
- To gain employer buy-in, recommended plan designs should start simple, especially for small employers. This will also keep employee communications materials simple, which is key to educating employees about their plan.
